

Central Freight Partners with the American Chemistry Council's Responsible Care Initiative

Central has been approved to join **The American Chemistry Council's Responsible Care Program**. **Central** is committed to supporting their initiative to assist the chemical industry in focusing on the environment, health, safety and security with care and vision for future generations.

Responsible Care is the chemical industry's global initiative under which companies work together to continuously improve their health, safety, security and environmental performance. Communication with manufacturers is key in supplying safe and affordable goods that bring real benefits to society.

Responsible Care was first conceived in Canada and was launched in 1985 to address public concerns about the manufacture, distribution and use of chemicals. **Responsible Care** has grown to become actively involved in 53 countries around the world. Virtually all the world's leading chemical manufacturers are part of **Responsible Care**.

Through a formal application process administered by the *American Chemistry Council*, **Central's** application was approved based on our commitment to continuous improvement in good management practices as it relates to a healthy environment, safety, health and security throughout our customers supply chain.

Central is proud to be part of this initiative in its effort towards sustainable safety performance indicators within the chemical industry.

If your customer is a shipper of chemicals, let them know we are a partner in the "**Responsible Care**" program.

Mari Ellen Borowski, Director of Business Development - *Dallas*
